## 5.1 Hazard Mitigation Strategy

### Hazard Priorities

Potential hazards, including natural, geological, and human-caused hazards, were rated by members of the Core Planning Committee, which included representatives from each jurisdiction in Clinton County. Each potential hazard was rated on a scale of zero to five, with zero indicating the hazard should not be studied and five indicating the most significant threat to the representative's jurisdiction. A priority score was developed for each hazard by averaging the representatives' ratings. The hazards were then ranked by their priority score, where the highest priority score was given a hazard rank of one for each jurisdiction within the County and for the County itself. The resulting hazard rank and associated priority score for each hazard are shown in **Tables 5.1.1 – 5.1.9**.

### **Hazards Not Assessed**

Below is a discussion covering hazards that were not included in this Plan update, as compared to the hazards included in the SOHMP and in Clinton County's previous 2020 HMP.

#### ***Coastal Erosion***

Coastal erosion is a hazard that is not applicable to Clinton County due to the County's inland location, so it was not assessed.

#### ***Dam and Levee Failure***

The Village of New Vienna and the Village of Sabina are not affected by Dam and Levee Failures and has opted to not include any mitigation actions for the hazard.

#### ***Earthquakes***

The Village of Sabina is not affected by earthquakes and has opted to not include any mitigation actions for the hazard.

#### ***Hurricanes/Tropical Storms***

Hurricanes/tropical storms are hazards that are not directly applicable to Clinton County due to the County's inland location, so they were not assessed. However, if remnants of hurricanes or tropical storms were experienced as thunderstorms, thunderstorm winds, or high/severe winds, those events were included in the severe summer storms and/or tornado assessments.

#### ***Invasive Species***

The Village of Sabina is not affected by invasive species and has opted to not include any mitigation actions for the hazard.

#### ***Landslides and Land Subsidence***

The Village of Sabina is not affected by landslides, land subsidence, and erosion and has opted to not include any mitigation actions for the hazard.

#### ***Seiche/Coastal Flooding***

Seiche/coastal flooding is a hazard that is not applicable to Clinton County due to the County's inland location, so it was not assessed.

## **5.2 Hazard Mitigation Goals**

Developing achievable goals forms the foundation for all mitigation actions and activities that will aid Clinton County in attaining the overall mission of the Core Planning Committee. As such, the Core Planning Committee and participating jurisdictions assessed the goals of the 2020 Hazard Mitigation Plan and updated them for this Plan update. Goals were established and reviewed based upon their relationship to the hazard priorities and potential adverse impact of those hazards upon the community. The goals, as well as the hazards assessed for this Plan, informed the development of actions that the County and participating jurisdictions can take to mitigate the impacts of the hazards. The goals of the Clinton County Hazard Mitigation Plan are as follows:

- Goal 1: Increase public information and awareness about hazards that affect Clinton County.
- Goal 2: Decrease dam hazard level.
- Goal 3: Expand awareness and minimize the effects from drought.
- Goal 4: Expand awareness and minimize the effects from flooding.
- Goal 5: Minimize the effects from hazardous materials.
- Goal 6: Minimize the threat of invasive species.
- Goal 7: Expand awareness about tornadoes and severe storms.
- Goal 8: Increase protection from possible terrorism events.
- Goal 9: Expand awareness about the effects from winter storms.
- Goal 10: Generate discussion on drug misuse and addiction within Clinton County.
- Goal 11: Increase understanding of epidemics/pandemics on Clinton County.
- Goal 12: Minimize possibility of widespread utility failure throughout Clinton County.

### Hazard Mitigation Actions & Priorities

Members of the Core Planning Committee completed a Previous Mitigation Action Status survey, which indicated the status of mitigation actions included in the 2020 Hazard Mitigation Plan. This survey asked representatives to indicate whether the mitigation actions from the previous plan were completed, deleted, deferred, unchanged, or ongoing. It also asked the representative if the mitigation action should be included in this Plan update. The final results are included in **Appendix B**. In addition, new mitigation actions were developed and considered for inclusion in this Plan update that address gaps in the previous plan or new issues that have arisen since the 2020 Plan.

All new and previous mitigation actions were reviewed and rated by members of the Core Planning Committee and local jurisdictions based on five criteria: cost-effectiveness, technical feasibility, environmental soundness, immediate need, and total risk reduction. For each action, each of the five criteria were rated on a scale of one to five (low to high). All of the surveys were collected and the individual criteria for each mitigation action were averaged and then added together to develop a single raw score for each individual mitigation action per jurisdiction. The raw score for each action was used in combination with the rankings of the associated hazard, as determined by the Hazard Priority Survey (**Tables 5.1.1 – 5.1.9**), to develop a score for each mitigation action. The action scores were then ranked to indicate the priority of each specific action. The action with the highest action score was given an action priority of one, indicating that action was the highest priority. Hazard Mitigation Action priorities are organized by hazard in **Table 5.2.1 – Table 5.2.9**. Each table is specific to the jurisdiction or county. The information used to develop the priorities from the jurisdictions surveys and comments can be found in **Appendix G**, along with all completed surveys that were used to prioritize the hazards and develop the goals.

Mitigation projects will only be implemented if the benefits outweigh the associated costs of the proposed projects. The Core Planning Committee, in coordination with the Clinton County EMA, performed a general assessment of each action that would require FEMA funding as part of the planning process. A detailed cost-benefit analysis of each mitigation action will be required during the project planning phase in order to determine the economic feasibility of each action. Projects will also be evaluated for social and environmental impact-related feasibility, as well as technical feasibility and any other criteria that evaluate project effectiveness. This evaluation of each project will be performed during the pre-application phase of a grant request. Project implementation will be subject to the availability of FEMA grants and other funding sources, as well as local resources.

Projects that are determined to be infeasible during this review process will be re-evaluated by members of the Core Planning Committee for re-scheduling or deletion.
